About Me

I am a multidisciplinary and approachable developer which enjoys creating well-designed products for people.
My main motivation comes from creating beautiful, functional, and easy-to-use websites, which leads to a big responsibility that I enjoy taking on a daily basis.

I constantly have a side-project, too curious to stop learning new things.
I'm also interested in 3D, contemporary art, and everything that is visually attractive.

Tech Stack

HTML | CSS | JavaScript
React | NodeJS | Express
TypeScript | MongoDB
Firebase | DigitalOcean

- Managed to convert at least 50% of phone orders to digital during the firsts 3 months of release.
- Set up to handle cooking pots returns as also as shipping orders.
- Maintained relations with the restaurant's owner and applied changes meeting deadlines

Projects

Anthropocene.otf Link   2019 - 2020

Developed the Front-End Part of the website.
The idea of this project won the "Federico Alessandri Prize" in 2019, materialized during the course of 2020 and presented at the "Surprize" exhibition, Pesaro, IT.
Anthropocene.otf is a parametric typeface that will change its design based on the air pollution level in the world.
Users can import the font via CDN into their websites, viewers will receive the corresponding weighted font based on their location, the project aims to give people awareness about their air quality.
